## Harvest Update

June 17, 2015

### TIMOTHY

As we move through this season's Timothy harvest, we felt it would be helpful to give customers an update as they prepare for inspections over the next several weeks. We are seeing Timothy prices come down across the board which helps offset the weakening yen.

While we feel true Premium Dairy through Premium Horse will be tighter than expected, we are putting together some of the nicest quality in years. Premium Dairy will have very limited amounts of brown stem and great overall color. We are seeing a larger bucket of what most suppliers call 1-A. This hay is also nice but will show some brown stem, and is more reflective of a lower level Premium Dairy from the last few years. We are also seeing a large bucket of #1 Dairy. There seems to be more of this hay due to fields laying over and temperatures turning unseasonably hot. This hay should be priced very competitively with Oat Hay, Sudan, and other crops as the shipping season continues.

We feel this will be a great year for customers to get back to expecting the high-end quality that has been the region's trademark over the past several decades, at a much more reasonable price. We look forward to getting out with customers and showing this season's Timothy harvest.

### ALFALFA

Cut	1st	2nd	3rd	4th	5th	6th	7th
Washington	100%	25%					
Oregon	35%						
New Mexico	60%						
Utah	80%

Baled	1st
Willamette Valley Fescue	
Willamette Valley Rye	

### PNW ALFALFA

First cutting harvest is almost completely wrapped up, with 2nd cutting starting in some areas. We are seeing a very nice 2nd cutting and harvest will continue in full effort as the 10-day weather forecast remains stable.

### STRAW

Fescue harvest is expected to begin next week in the Willamette Valley, providing dry weather continues as forecasted.

### PSW ALFALFA

Unseasonable weather over the weekend has hampered harvest in Eastern Arizona, Utah, and New Mexico, keeping supply of export quality Alfalfa limited. Arizona growers are wrapping up their 4th cutting harvest and beginning 5th cutting. Other areas in the PSW are approximately 70% of the way through their 1st cutting.
